

Heat Sink

This example is intended as a first introduction to simulations of fluid flow and conjugate heat transfer.

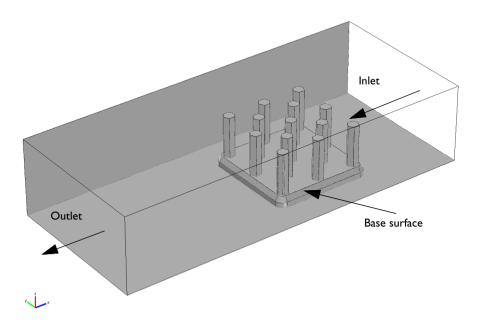

Figure 1: The application setup including channel and heat sink.

Model Definition

The modeled system consists of an aluminum heat sink for cooling of components in electronic circuits mounted inside a channel of rectangular cross section (see Figure 1).

Such a setup is used to measure the cooling capacity of heat sinks. Air enters the channel at the inlet and exits the channel at the outlet. The base surface of the heat sink receives a 1 W heat flux from an external heat source. All other external faces are thermally insulated.

The cooling capacity of the heat sink can be determined by monitoring the temperature of the base surface of the heat sink.

The model solves a thermal balance for the heat sink and the air flowing in the rectangular channel. Thermal energy is transported through conduction in the aluminum heat sink and through conduction and convection in the cooling air. The temperature field is continuous across the internal surfaces between the heat sink and the air in the channel.

The temperature is set at the inlet of the channel. The base of the heat sink receives a 1 W heat flux. The transport of thermal energy at the outlet is dominated by convection.

The flow field is obtained by solving one momentum balance for each space coordinate (x, y, and z) and a mass balance. The inlet velocity is defined by a parabolic velocity profile for fully developed laminar flow. At the outlet, the normal stress is equal the outlet pressure and the tangential stress is nullified. At all solid surfaces, the velocity is set to zero in all three spatial directions.

The thermal conductivity of air, the heat capacity of air, and the air density are all temperature-dependent material properties.

You can find all of the settings mentioned above in the predefined multiphysics coupling for Conjugate Heat Transfer in COMSOL Multiphysics. You also find the material properties, including their temperature dependence, in the Material Browser.

Results

In Figure 2, the hot wake behind the heat sink visible in the plot is a sign of the convective cooling effects. The maximum temperature, reached at the heat sink base, is about 380 K.

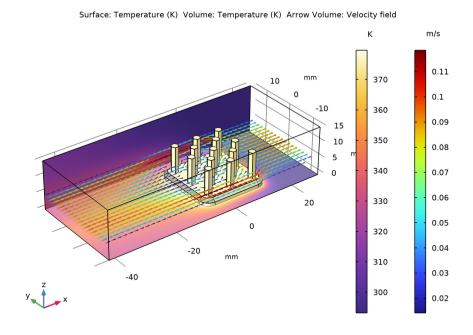

Figure 2: The surface plot shows the temperature field on the channel walls and the heat sink surface, while the arrow plot shows the flow velocity field around the heat sink.

Application Library path: CFD Module/Nonisothermal Flow/heat sink

Modeling Instructions

From the **File** menu, choose **New**.

NEW

In the New window, click Model Wizard.

MODEL WIZARD

- I In the Model Wizard window, click **3D**.
- 2 In the Select Physics tree, select Heat Transfer>Conjugate Heat Transfer>Laminar Flow.
- 3 Click Add.
- 4 Click Study.
- 5 In the Select Study tree, select General Studies>Stationary.
- 6 Click Done.

GEOMETRY I

Note that the Geometry representation must be set to COMSOL kernel to fit with the numbering of the boundaries used in these instructions.

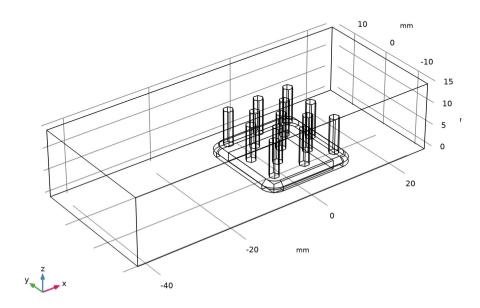

The model geometry is available as a parameterized geometry sequence in a separate MPH-file. If you want to create it from scratch yourself, you can follow the instructions in the Geometry Modeling Instructions section. Otherwise, insert the geometry sequence as follows:

- I In the Geometry toolbar, click Insert Sequence and choose Insert Sequence.
- **2** Browse to the model's Application Libraries folder and double-click the file heat sink geom sequence.mph.

The application's Application Library folder is shown in the Application Library path section immediately before the current section. Note that the path given there is relative to the COMSOL Application Library root, which for a standard installation on Windows is C:\Program Files\COMSOL\COMSOL62\Multiphysics\Applications.

3 In the Geometry toolbar, click **Build All**.

- 4 Click the **Zoom Extents** button in the **Graphics** toolbar.
 - To facilitate face selection in the next steps, use the **Wireframe rendering** option (skip this step if you followed the instructions in the appendix):
- 5 Click the Wireframe Rendering button in the Graphics toolbar.
- 6 In the Model Builder window, under Component I (compl) click Geometry I.

LAMINAR FLOW (SPF)

- I In the Model Builder window, under Component I (compl) click Laminar Flow (spf).
- 2 In the Settings window for Laminar Flow, locate the Domain Selection section.
- 3 From the Selection list, choose Air.

HEAT TRANSFER IN SOLIDS AND FLUIDS (HT)

Fluid 1

- I In the Model Builder window, under Component I (compl)>
 Heat Transfer in Solids and Fluids (ht) click Fluid I.
- 2 In the Settings window for Fluid, locate the Domain Selection section.
- 3 From the Selection list, choose Air.

MATERIALS

Next, add materials.

ADD MATERIAL

- I In the Home toolbar, click Radd Material to open the Add Material window.
- 2 Go to the Add Material window.
- 3 In the tree, select Built-in>Air.
- 4 Click Add to Component in the window toolbar.
- 5 In the tree, select Built-in>Aluminum 3003-H18.
- 6 Click Add to Component in the window toolbar.
- 7 In the tree, select Built-in>Silica glass.
- **8** Click **Add to Component** in the window toolbar.
- 9 In the Home toolbar, click **‡** Add Material to close the Add Material window.

MATERIALS

Air (mat I)

- I In the Model Builder window, under Component I (compl)>Materials click Air (matl).
- 2 In the Settings window for Material, locate the Geometric Entity Selection section.
- 3 From the Selection list, choose Air.

Aluminum 3003-H18 (mat2)

- I In the Model Builder window, click Aluminum 3003-H18 (mat2).
- 2 In the Settings window for Material, locate the Geometric Entity Selection section.
- 3 From the Selection list, choose Aluminum.

Silica glass (mat3)

- I In the Model Builder window, click Silica glass (mat3).
- 2 In the Settings window for Material, locate the Geometric Entity Selection section.
- 3 From the Selection list, choose Silica Glass.

GLOBAL DEFINITIONS

Parameters 1

- I In the Model Builder window, under Global Definitions click Parameters I.
- 2 In the Settings window for Parameters, locate the Parameters section.

3 In the table, enter the following settings:

Name	Expression	Value	Description	
U0	5[cm/s]	0.05 m/s	Mean inlet velocity	
P0	1 [W]	ΙW	Total power dissipated by the electronics package	

Now define the physical properties of the model. Start with the fluid domain.

Add a node for the ambient properties in the model. The default temperature value is 293.15 K. It is possible to edit the ambient temperature value or to define it using the meteorological data which gives access to climate data from more than 8600 stations in the world.

DEFINITIONS

Ambient Properties I (amprl)

In the Physics toolbar, click **Shared Properties** and choose **Ambient Properties**.

LAMINAR FLOW (SPF)

The no-slip condition is the default boundary condition for the fluid. Define the inlet and outlet conditions as described below.

I In the Model Builder window, under Component I (compl) click Laminar Flow (spf).

Inlet I

- I In the Physics toolbar, click **Boundaries** and choose Inlet.
- 2 In the Settings window for Inlet, locate the Boundary Selection section.
- 3 From the Selection list, choose Inlet.
- 4 Locate the Boundary Condition section. From the list, choose Fully developed flow.
- **5** Locate the **Fully Developed Flow** section. In the $U_{\rm av}$ text field, type U0.

Outlet I

- I In the Physics toolbar, click **Boundaries** and choose **Outlet**.
- 2 Click the **Zoom Extents** button in the **Graphics** toolbar.
- 3 In the Settings window for Outlet, locate the Boundary Selection section.
- 4 From the Selection list, choose Outlet.

HEAT TRANSFER IN SOLIDS AND FLUIDS (HT)

Thermal insulation is the default boundary condition for the temperature. Define the inlet temperature and the outlet condition as described below.

I In the Model Builder window, under Component I (compl) click Heat Transfer in Solids and Fluids (ht).

Inflow I

- I In the Physics toolbar, click Boundaries and choose Inflow.
- 2 In the Settings window for Inflow, locate the Boundary Selection section.
- **3** From the **Selection** list, choose **Inlet**.

The ambient temperature is defined in the Ambient Properties node under Shared Properties.

Locate the **Upstream Properties** section. From the T_{ustr} list, choose Ambient temperature (amprI).

Outflow I

- I In the Physics toolbar, click Boundaries and choose Outflow.
- 2 In the Settings window for Outflow, locate the Boundary Selection section.
- 3 From the Selection list, choose Outlet.

Next, use the P0 parameter to define the total heat source in the electronics package.

Heat Source 1

- I In the Physics toolbar, click **Domains** and choose **Heat Source**.
- 2 In the Settings window for Heat Source, locate the Domain Selection section.
- 3 From the Selection list, choose Silica Glass.
- 4 Locate the Heat Source section. From the Heat source list, choose Heat rate.
- **5** In the P_0 text field, type P0.

MESH I

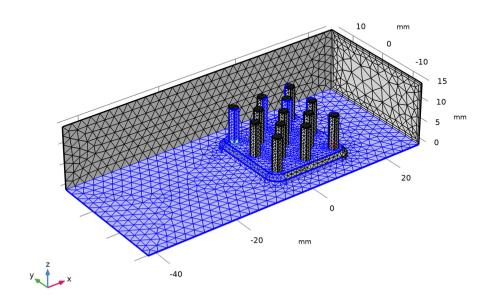

- I In the Model Builder window, under Component I (compl) click Mesh I.
- 2 In the Settings window for Mesh, locate the Physics-Controlled Mesh section.
- 3 From the Element size list, choose Coarser.
- 4 Click Build All.

To get a better view of the mesh, hide some of the boundaries.

5 Click the **Click and Hide** button in the **Graphics** toolbar.

- 6 In the Graphics window toolbar, click ▼ next to Select Boundaries, then choose Select Boundaries.
- **7** Select Boundaries 1, 2, and 4 only.

 The finished mesh should look like that in the figure below.

To achieve more accurate numerical results, this mesh can be refined by choosing another predefined element size. However, doing so requires more computational time and memory.

STUDY I

In the **Home** toolbar, click **Compute**.

RESULTS

Four default plots are generated automatically. The first one shows the temperature in the channel, the second one shows the velocity magnitude on five parallel slices, and the third one shows the pressure field. The last plot visualizes the velocity field with wall temperature.

Transparency I

- I In the Model Builder window, expand the Results>Temperature (ht) node.
- 2 Right-click Volume I and choose Transparency.

Temperature and Fluid Flow (nitf1)

Apply the following steps to the fourth default plot.

Fluid Flow

- I In the Model Builder window, expand the Temperature and Fluid Flow (nitfl) node, then click Fluid Flow.
- 2 In the Settings window for Arrow Volume, locate the Arrow Positioning section.
- 3 Find the x grid points subsection. In the Points text field, type 40.
- 4 Find the y grid points subsection. In the Points text field, type 20.
- 5 Find the z grid points subsection. From the Entry method list, choose Coordinates.
- 6 In the Coordinates text field, type 5.

Filter I

- I In the Model Builder window, expand the Fluid Flow node, then click Filter I.
- 2 In the Settings window for Filter, locate the Element Selection section.
- 3 In the Logical expression for inclusion text field, type spf.U>0.25*nitf1.Uave.
- Finally, check the energy balance.

ADD PREDEFINED PLOT

- I In the Home toolbar, click Windows and choose Add Predefined Plot.
- 2 Go to the Add Predefined Plot window.
- 3 In the tree, select Study I/Solution I (soll)>Heat Transfer in Solids and Fluids> Energy Balance (ht).
- 4 Click Add Plot in the window toolbar.

RESULTS

Energy Balance (ht)

I In the Energy Balance (ht) toolbar, click **= Evaluate**.

In the **Energy Balance (ht)** table underneath the **Graphics** window you can verify that the energy-balance value is close to zero, indicating a good energy balance. Furthermore, as expected in a stationary model, the total accumulated energy rate is equal to zero. The total net energy rate is close to 1 W, which balances the total heat source. Finally, the total work source is close to zero, because there are no external forces performing work and the work done by viscous stresses is negligible.

Geometry Modeling Instructions

If you want to create the geometry yourself, follow these steps.

GLOBAL DEFINITIONS

Parameters 1

- I In the Model Builder window, under Global Definitions click Parameters I.
- 2 In the Settings window for Parameters, locate the Parameters section.
- **3** In the table, enter the following settings:

Name	Expression	Value	Description
L_channel	7[cm]	0.07 m	Channel length
W_channel	3[cm]	0.03 m	Channel width
H_channel	1.5[cm]	0.015 m	Channel height
L_chip	1.5[cm]	0.015 m	Chip size
H_chip	2[mm]	0.002 m	Chip height

ADD COMPONENT

In the **Home** toolbar, click **Add Component** and choose **3D**.

GEOMETRY I

- I In the Settings window for Geometry, locate the Units section.
- 2 From the Length unit list, choose mm.

Work Plane I (wpl)

- I In the Geometry toolbar, click Work Plane.
- 2 In the Settings window for Work Plane, locate the Plane Definition section.
- 3 From the Plane list, choose xz-plane.
- 4 In the y-coordinate text field, type -7.5.

Work Plane I (wb I)>Plane Geometry

In the Model Builder window, click Plane Geometry.

Work Plane I (wpl)>Polygon I (poll)

- I In the Work Plane toolbar, click / Polygon.
- 2 In the Settings window for Polygon, locate the Coordinates section.
- 3 From the Data source list, choose Vectors.

- **4** In the **xw** text field, type -10.495 -9.495 -9.495 -9.495 -9.495 -10.495 -10.495 -10.495
- **5** In the **yw** text field, type 0 0 0 2 2 1 1 0.

Revolve I (rev1)

- I In the Model Builder window, under Component I (compl)>Geometry I right-click Work Plane I (wpl) and choose Revolve.
- 2 In the Settings window for Revolve, locate the Revolution Angles section.
- 3 Click the Angles button.
- 4 In the End angle text field, type 90.
- 5 Locate the Revolution Axis section. From the Axis type list, choose 3D.
- 6 Find the Point on the revolution axis subsection. In the x text field, type -7.5.
- 7 In the y text field, type -7.5.
- 8 Find the Direction of revolution axis subsection. In the y text field, type 0.
- 9 In the z text field, type 1.
- 10 Locate the Selections of Resulting Entities section. Find the Cumulative selection subsection. Click New.
- II In the New Cumulative Selection dialog box, type Aluminum in the Name text field.
- I2 Click OK.

Extrude I (ext I)

- I In the Geometry toolbar, click Extrude.
- 2 In the Settings window for Extrude, locate the General section.
- 3 From the Extrude from list, choose Faces.
- 4 On the object rev1, select Boundary 1 only.
- **5** Locate the **Distances** section. In the table, enter the following settings:

Distances (mm)

- **6** Locate the **Selections of Resulting Entities** section. Find the **Cumulative selection** subsection. From the **Contribute to** list, choose **Aluminum**.
- 7 Locate the General section. In the tree, select rev1.

Rotate I (rot1)

I In the Geometry toolbar, click \(\sum_{\text{transforms}} \) Transforms and choose Rotate.

- 2 In the Settings window for Rotate, locate the Input section.
- 3 From the Input objects list, choose Aluminum.
- 4 Select the **Keep input objects** check box.
- 5 Locate the Rotation section. In the Angle text field, type range (90, 90, 270).
- **6** Locate the **Selections of Resulting Entities** section. Find the **Cumulative selection** subsection. From the **Contribute to** list, choose **Aluminum**.

Work Plane 2 (wb2)

- I In the Geometry toolbar, click Work Plane.
- 2 In the Settings window for Work Plane, locate the Plane Definition section.
- 3 From the Plane type list, choose Face parallel.
- 4 On the object ext1, select Boundary 4 only.

Work Plane 2 (wp2)>Plane Geometry

In the Model Builder window, click Plane Geometry.

Work Plane 2 (wb2)>Cross Section 1 (cro1)

- I In the Work Plane toolbar, click 🔷 Cross Section.
- 2 In the Settings window for Cross Section, locate the Selections of Resulting Entities section.
- 3 Select the **Resulting objects selection** check box.

Work Plane 2 (wp2)>Convert to Curve I (ccurl)

- I In the Work Plane toolbar, click Conversions and choose Convert to Curve.
- 2 In the Settings window for Convert to Curve, locate the Input section.
- 3 From the Input objects list, choose Cross Section 1.
- 4 Locate the Selections of Resulting Entities section. Select the Resulting objects selection check box.

Work Plane 2 (wb2)>Convert to Solid 1 (csol1)

- I In the Work Plane toolbar, click Conversions and choose Convert to Solid.
- 2 In the Settings window for Convert to Solid, locate the Input section.
- 3 From the Input objects list, choose Convert to Curve 1.
- 4 Click Pauld Selected.

Work Plane 2 (wb2)>Box Selection 1 (boxsel1)

In the Work Plane toolbar, click \(\frac{1}{2} \) Selections and choose Box Selection.

Work Plane 2 (wp2)>Box Selection 2 (boxsel2)

- I In the Work Plane toolbar, click \(\frac{1}{2} \) Selections and choose Box Selection.
- 2 In the Settings window for Box Selection, locate the Box Limits section.
- 3 In the xw minimum text field, type -10.
- 4 In the xw maximum text field, type -10.
- 5 In the yw minimum text field, type 0.
- 6 In the yw maximum text field, type 0.
- 7 In the Work Plane toolbar, click Build All.

Work Plane 2 (wp2)>Difference Selection 1 (difsel1)

- I In the Work Plane toolbar, click Selections and choose Difference Selection.
- 2 In the Settings window for Difference Selection, locate the Input Entities section.
- 3 Click the + Add button for Selections to add.
- 4 In the Add dialog box, select Box Selection I in the Selections to add list.
- 5 Click OK.
- 6 In the Settings window for Difference Selection, locate the Input Entities section.
- 7 Click the + Add button for Selections to subtract.
- 8 In the Add dialog box, select Box Selection 2 in the Selections to subtract list.
- 9 Click OK.

Work Plane 2 (wb2)>Delete Entities 1 (del1)

- I Right-click Plane Geometry and choose Delete Entities.
- 2 In the Settings window for Delete Entities, locate the Entities or Objects to Delete section.
- 3 From the Geometric entity level list, choose Domain.
- 4 From the Selection list, choose Difference Selection 1.

Extrude 2 (ext2)

- I In the Model Builder window, under Component I (compl)>Geometry I right-click Work Plane 2 (wp2) and choose Extrude.
- 2 In the Settings window for Extrude, locate the Distances section.
- **3** In the table, enter the following settings:

Distances (mm)

4 Select the Reverse direction check box.

5 Locate the Selections of Resulting Entities section. Find the Cumulative selection subsection. From the Contribute to list, choose Aluminum.

Work Plane 3 (wp3)

- I In the Geometry toolbar, click Work Plane.
- 2 In the Settings window for Work Plane, locate the Plane Definition section.
- 3 In the z-coordinate text field, type 2.
- 4 Locate the Unite Objects section. Clear the Unite objects check box.

Work Plane 3 (wb3)>Plane Geometry

In the Model Builder window, click Plane Geometry.

Work Plane 3 (wp3)>Polygon I (pol1)

- I In the Work Plane toolbar, click / Polygon.
- 2 In the Settings window for Polygon, locate the Coordinates section.
- 3 From the Data source list, choose Vectors.
- **4** In the **xw** text field, type -8.597 -8.048 -8.048 -6.952 -6.952 -6.4 -6.4 -6.952 -6.952 -8.048.
- **5** In the **yw** text field, type -7.5 -8.45 -8.45 -8.45 -7.5 -7.5 -6.55 -6.55 -6.55

Work Plane 3 (wp3)>Copy I (copyI)

- I In the Work Plane toolbar, click \(\sum_{\coloredta} \) Transforms and choose Copy.
- **2** Select the object **poll** only.
- 3 In the Settings window for Copy, locate the Displacement section.
- 4 In the xw text field, type 3.748.
- 5 In the yw text field, type 3.748.

Extrude 3 (ext3)

- I In the Model Builder window, under Component I (compl)>Geometry I right-click Work Plane 3 (wp3) and choose Extrude.
- 2 In the Settings window for Extrude, locate the Distances section.
- **3** In the table, enter the following settings:

Distances (mm)

Array I (arrI)

- I In the Geometry toolbar, click \(\sum_{\text{in}} \) Transforms and choose Array.
- 2 Click the **Toom Extents** button in the **Graphics** toolbar.
- 3 Select the object ext3(1) only.
- 4 In the Settings window for Array, locate the Size section.
- 5 In the x size text field, type 3.
- 6 In the y size text field, type 3.
- 7 Locate the **Displacement** section. In the x text field, type 7.495.
- 8 In the y text field, type 7.495.
- **9** Locate the Selections of Resulting Entities section. Find the Cumulative selection subsection. From the Contribute to list, choose Aluminum.

Array 2 (arr2)

- I In the Geometry toolbar, click Transforms and choose Array.
- 2 Select the object ext3(2) only.
- 3 In the Settings window for Array, locate the Size section.
- 4 In the x size text field, type 2.
- 5 In the y size text field, type 2.
- 6 Locate the **Displacement** section. In the x text field, type 7.495.
- 7 In the y text field, type 7.495.
- 8 Locate the Selections of Resulting Entities section. Find the Cumulative selection subsection. From the Contribute to list, choose Aluminum.

Union I (unil)

- I In the Geometry toolbar, click Booleans and Partitions and choose Union.
- 2 In the Settings window for Union, locate the Union section.
- 3 From the Input objects list, choose Aluminum.
- 4 Locate the Selections of Resulting Entities section. Find the Cumulative selection subsection. From the Contribute to list, choose Aluminum.
- 5 Locate the Union section. Clear the Keep interior boundaries check box.

Block I (blk I)

- I In the Geometry toolbar, click Block.
- 2 In the Settings window for Block, locate the Size and Shape section.
- **3** In the **Width** text field, type L_chip.

- 4 In the **Depth** text field, type L chip.
- 5 In the **Height** text field, type H chip.
- 6 Locate the Position section. From the Base list, choose Center.
- 7 In the z text field, type -H chip/2.
- 8 Locate the Selections of Resulting Entities section. Find the Cumulative selection subsection. Click New.
- 9 In the New Cumulative Selection dialog box, type Silica Glass in the Name text field.

 10 Click OK.

Block 2 (blk2)

- I In the **Geometry** toolbar, click **Block**.
- 2 In the Settings window for Block, locate the Size and Shape section.
- 3 In the Width text field, type L channel.
- 4 In the **Depth** text field, type W_channel.
- 5 In the Height text field, type H_channel.
- 6 Locate the Position section. In the x text field, type -45.
- 7 In the y text field, type -W_channel/2.

Form Union (fin)

- I In the Model Builder window, click Form Union (fin).
- 2 In the Settings window for Form Union/Assembly, click **Build Selected**.

Air

- I In the Geometry toolbar, click 🗣 Selections and choose Explicit Selection.
- 2 On the object fin, select Domain 1 only.
- 3 In the Settings window for Explicit Selection, type Air in the Label text field.
- 4 Click the **Zoom Extents** button in the **Graphics** toolbar.

Inlet

- I In the Geometry toolbar, click 🔓 Selections and choose Explicit Selection.
- 2 In the Settings window for Explicit Selection, type Inlet in the Label text field.
- 3 Locate the Entities to Select section. From the Geometric entity level list, choose Boundary.
- 4 On the object fin, select Boundary 129 only.

Outlet

- I In the Geometry toolbar, click \(\frac{1}{2} \) Selections and choose Explicit Selection.
- 2 In the Settings window for Explicit Selection, type Outlet in the Label text field.
- **3** Locate the **Entities to Select** section. From the **Geometric entity level** list, choose **Boundary**.
- 4 On the object fin, select Boundary 1 only.

Air Boundaries

- I In the Geometry toolbar, click \(\frac{1}{2} \) Selections and choose Adjacent Selection.
- 2 In the Settings window for Adiacent Selection, locate the Input Entities section.
- 3 Click + Add.
- 4 In the Add dialog box, select Air in the Input selections list.
- 5 Click OK.
- 6 In the Settings window for Adjacent Selection, type Air Boundaries in the Label text field.

Exterior Walls

- I In the Geometry toolbar, click \(\frac{1}{2} \) Selections and choose Difference Selection.
- 2 In the Settings window for Difference Selection, type Exterior Walls in the Label text field.
- 3 Locate the Geometric Entity Level section. From the Level list, choose Boundary.
- 4 Locate the Input Entities section. Click the + Add button for Selections to add.
- 5 In the Add dialog box, select Air Boundaries in the Selections to add list.
- 6 Click OK.
- 7 In the Settings window for Difference Selection, locate the Input Entities section.
- 8 Click the + Add button for Selections to subtract.
- 9 In the Add dialog box, in the Selections to subtract list, choose Inlet and Outlet.
- IO Click OK.

Thermal Grease

- I In the Geometry toolbar, click \(\frac{1}{2} \) Selections and choose Intersection Selection.
- 2 In the Settings window for Intersection Selection, type Thermal Grease in the Label text field.
- 3 Locate the Geometric Entity Level section. From the Level list, choose Boundary.
- **4** Locate the **Input Entities** section. Click + **Add**.

- 5 In the Add dialog box, in the Selections to intersect list, choose Aluminum and Silica Glass.
- 6 Click OK.
